## Discovery Assay to Select Best Bispecific Antibodies Formats

Vivia's ex vivo assays in discovery phase can reveal big differences in Bispecific Antibodies (BsAb) formats. Isolated BsAb-activated T Cells against tumor cells over time and at different E:T ratios show different activity.

Different BsAb formats activate T cells with different killing activity.  
Assay serves to select best BsAb candidate

- We can differentiate distinct BsAb formats aimed at the same target.
- Assays can reveal critical differences in cellular death for each BsAb format.
- We can select the best BsAb format:
  - Screening 100s of hits
  - Hit-to-Lead selection
